Manage

To create a SUBDOMAIN click '**Pointers and Subdomains**' at the left pane and then click '+ **Add Subdomain**', in our use case we would like to create 'kops.learn-devops.online' SUBDOMAIN.

 Add Subdomain

Subdomain Name	Directory
----------------	-----------

Enter '**kops**' as Subdomain Name and '/' as Directory (URL prefix), and click '**Save**'.

Subdomain Name *	Directory
<input type="text" value="kops"/>	<input type="text" value="/"/>
<div>Save</div>	

To create NS Records as provided by AWS Route53 Hosted Zone, click '**DNS & Nameservers**' at the left pane, and then click '**DNS RECORDS**'. Click '+ **Add DNS Record**'.

 Add DNS Record

Enter:

'**kops**' as Name

'**NS**' as Type

'**ns-1633.awsdns-12.co.uk**' as Content

'**1 Week**' as TTL (Time To Live)

Leave blank for Priority

Click '**Add DNS**'

Add New DNS Record

Use the following tool to add any record type to your DNS table.

Name

kops

Type

NS

Content

ns-1633.awsdns-12.co.uk

TTL (Time To Live)

1 Week

Priority

Add DNS

Repeat for the rest of the three NS Records, finally:

NS	kops	ns-1633.awsdns-12.co.uk	n/a	⋮
NS	kops	ns-1456.awsdns-54.org	n/a	⋮
NS	kops	ns-404.awsdns-50.com	n/a	⋮
NS	kops	ns-836.awsdns-40.net	n/a	⋮
